1.3 重点热点前沿——“KRAS(G12C) 抑制剂与肿瘤靶向治疗”

KRAS 是人类肿瘤中最常突变的癌基因之一，在细胞生长信号通路调控方面发挥重要作用。KRAS 突变后，其蛋白持续活化，异常下游信号传导，[illegible] 制了其进一步发挥作用，

索托拉西布（Sotorasib，研发代号 AMG510）于 2021 年首先获准在美国上市。但在临床持续用药过程中，[illegible] 中十余篇论文都与首批获准上市

的抗肿瘤机制、临床试验，研发过程、耐药性和耐药机制，以及 RAS 蛋白调控机制、RAS 突变频[illegible] 受控制的细胞生长和肿瘤发生。 药性，限

As a semiconductor material and a new type of functional material with huge application potential, perovskite is developing rapidly. Perovskite refers to a class of compounds that have a chemical structure similar to calcium titanate ($CaTiO_3$), which was the first perovskite material discovered in 1839. Its molecular formula can be expressed as ABX_3 structure, where A, B, and X represent different elements. A represents the organic or inorganic cations, such as CH3NH+3CH3NH3+ , CH(NH2)+2CH(NH2)2+ , and Cs^+, B denotes the metal ions, such as Sn^{2+} and Pb^{2+}, and *X* is the halogen anions such as Cl^-, Br, and $I^{-1,2}$. The crystal structure of the perovskite material has a stable and regular octahedral structure, with the metal cation B as the nucleus, the halogen anion at the top corner, and the organic or inorganic cation in the middle to balance the charge[3].
